Comments:

The second manual snow survey for 2015 was finished on February 28, 2014. The snowpack in the mountains west of Laramie show that the southern part of the mountains are at 97% of median using the new 30 year median, and the northern end of the mountains are at 80% of median using the new 30 year median. Last year at this time they were 126% to 134% using the new 30 year median. The mountains east of Laramie show the snowpack at 80% of median, compared to 126% last year. While these numbers may be below average, it is too early in the year to know what kind of snowpack we will have by spring.

This information is provided as a public service from the Wyoming State Engineer's Office.

Manual snow surveys are conducted at the end of January, February, March and April. Data from these surveys is combined with data from automated SNOTEL sites to come up with average snowpack values. For more information you can contact Rod Oliver at 760-4167, or Matt Hoobler at 777-7641.
